

Buy Online Aldactone The pharmacological effect of both drugs is almost identical. indapamide lozol and spironolactone aldactone

The drug is prescribed for gout and diabetes. indapamide lozol and spironolactone aldactone

Ethacrynic acid has the same indications, as furosemide, except hypertension, since it is not suitable for prolonged use. indapamide lozol and spironolactone aldactone

Weak potassium-sparing diuretic, onset of action within 2 - 4 hours, duration of effect - 7-16 hours. indapamide lozol and spironolactone aldactone

The drug is prescribed for gout and diabetes. indapamide lozol and spironolactone aldactone

This causes a reduced supply of blood in sodium anion, used to recharge alkaline reserve of blood, urine, and admission to the hydrogen ion is exchanged for sodium ion. indapamide lozol and spironolactone aldactone

The diuretic effect of the drug is maintained up to 18 hours, which facilitates portability of therapy due to lack of very frequent urination in the first hours after oral administration, limiting the activity of the patients. indapamide lozol and spironolactone aldactone

Activity spironolactone independent of the acid-base status. indapamide lozol and spironolactone aldactone

Acid dissociates into a proton and sodium hydrogen-anion, which enters the bloodstream, and the proton of hydrogen - into the lumen of the tubules by exchanging sodium ion to reabsorbed, which together with the hydrogen-anion adds alkaline reserve of blood. indapamide lozol and spironolactone aldactone

Henle, causing reduced or entirely inhibited reabsorption of sodium ions and decreases the osmotic pressure of the intracellular fluid and water reabsorption. indapamide lozol and spironolactone aldactone

The mechanism of action of diuretics is due to renal ability to block enzymes kidney, providing transport of electrolytes, and oppression in the end tubule reabsorption, leading to a significant increase in the excretion of sodium, chlorine, potassium. indapamide lozol and spironolactone aldactone

This diuretic effect develops slowly - 2-5 days and is quite poorly defined. indapamide lozol and spironolactone aldactone

Diuretics average potency.indapamide lozol and spironolactone aldactone

When idiopathic kaltsiurii and oxalate stones.indapamide lozol and spironolactone aldactone

The pharmacological effect of both drugs is almost identical.indapamide lozol and spironolactone aldactone
